EV Charging Infrastructure: Present and Future

SIEW 2018 Roundtable: Electric Vehicles & Smart Infrastructure

Confidential

greenlots

Presentation Overview

- How is the global EV market performing?
- E-Mobility Ecosystem
- Powering the Ecosystem
- EV Charging: Present and Future
- Conclusions

How is the global EV market performing?

Global EV Sales:

- Surpassed 1-million mark in 2017
- Growth mostly unaffected by sustained low oil prices (2014 – 2018)
- 2-million mark expected in 2018

Cumulative EV Population milestones:

- 1st million: 2014-07
- 2nd million: 2016-02
- 3rd million: 2017-11
- 4th million: 2018-09
- 5th million: 2019-03 (estimated)

Putting this in context of global vehicle market...

Electric Mobility:

- Impressive growth, but...
- There are over 80 million passenger vehicles in total
- 4 million EVs is just 5% of global vehicle population
- Only at the beginning of the electric S-curve

Presentation Overview

- How is the global EV market performing?
- E-Mobility Ecosystem
- Powering the Ecosystem
- EV Charging: Present and Future
- Conclusions

E-Mobility Ecosystem

Sustaining the Ecosystem:

- Automakers -> EV models
- Building Owners -> Locations
- Hardware OEMs -> EV Chargers
- Utility Companies -> Electricity supply
- EV Owners -> Consumption

Greenlots to coordinate by providing technology solutions for every stakeholder

E-Mobility Ecosystem: SKY™ EV Charging Network

Network Management

- Network-wide monitoring system
- View status of each charging station

Flexible Retail Pricing

- Set different charging rates
- Dynamic time-of-use rates

Predictive Analytics

- Analytics and reporting on utilization
- Predict maintenance requirements

Smart EV Charging

- Automatically curtail charging during periods of peak demand

Driver Mobile App

- Easily locate chargers
- Multiple payment options
- Check charging status

Presentation Overview

- How is the global EV market performing?
- E-Mobility Ecosystem
- Powering the Ecosystem
- EV Charging: Present and Future
- Conclusions

Powering the Ecosystem

Challenges:

- Large consumption of energy by EVs (e.g. BMW i3 battery: 33kWh)
- Unregulated EV charging can destabilize, or even overload the grid distribution network

Opportunities:

- Revenue from EV charging
- Smart charging & Demand response
- Battery storage is a future grid asset!

Powering the Ecosystem: City of Los Angeles, L.A.P.D

Project Overview

The City of Los Angeles has a target of 50% of new city fleet vehicles to be electric by 2017 and 80% by 2025.

- LAPD is the largest fleet in the city and the first department to “go electric” with the first 150 BMW i3s out of 500 EVs in total
- Building on open standards allows HW to be selected based on specific site requirements
- Greenlots was selected to provide 100 AC and 4 DC Fast Chargers at one location with demand response capabilities

Key Benefits

Load management avoids electrical infrastructure upgrades and reduces demand charges.

- Responds to real-time electricity demand of building
- Charge optimization and prioritization ensures vehicles are charged when they are needed
- Fleet reporting tracks fleet data, operating cost and efficiencies of an all-electric fleet.
- Rolling out charging infrastructure at 25 facilities across city

Powering the Ecosystem: Electrify America

Community-Based Destination Charging

Greenlots selected to deploy **900** stations in eight cities at more than **140** sites

Nationwide Fast Charging Network

Greenlots selected to provide the network operating platform to manage **2000+** high power chargers across the US

Presentation Overview

- How is the global EV market performing?
- E-Mobility Ecosystem
- Powering the Ecosystem
- EV Charging: Present and Future
- Conclusions

The Four Automotive Megatrends...

A Autonomous

- EV vehicle architecture has a central control unit to facilitate autonomy
- Autonomous charging could add convenience

C Connected

- A connected EV ecosystem could increase the convenience of charging
- Connected car grid solutions could enable cost-effective load balancing

S Shared

- Greater annual driving distances can offer a decisive TCO edge for EVs
- Some consumers may prefer access to multiple vehicle types over ownership (including EVs)

E Electrified

- Tightening emissions efficiency rules make EVs necessary to meet standards
- Lower battery costs improve EV economics

Automotive
industry
megatrends

EV Charging: Present and Future

EVSE trends must also follow EV trends closely...

- Autonomous driving
- Shared vehicles
- Connected
- Bigger Batteries

- Wireless Charging Capabilities
- Shared & Social Charging
- Interoperability between networks
- High Power & Smarter Charging

EV Charging: Present and Future

Present Expectations of EV Charging Networks:

- Must be user-friendly
- Must be easily located & navigated to
- Must operate reliably
- Must be convenient to make payment
- Must be able to charge quickly

EV Charging: Present and Future

Future Expectations of EV Charging Networks:

- Must be user-friendly
- Must be easily located & navigated to
- Must operate reliably
- Must be convenient to make payment
- Must be able to charge quickly
- Must be grid-friendly
- Must be easily scaled & managed
- Must interoperate across networks
- Must be convenient to save money
- Must charge optimally within building load requirements

Presentation Overview

- How is the global EV market performing?
- E-Mobility Ecosystem
- Powering the Ecosystem
- EV Charging: Present and Future
- Conclusions

Conclusions

**Estimate. Sources: Bloomberg, Earth Policy Institute, www.earth-policy.org*

Conclusions

1. E-mobility will be a huge business for utility & energy companies
2. EV Charging must be future-proofed for emerging EV trends
3. Robust EV Charging Management platforms will be key to scaling EV infrastructure
