

DEEPTECH TO ACCELERATE THE ENERGY TRANSITION

OCTOBER '22

Setup Sydrogen as Joint Venture

Highlights

Joint Venture (2021) between Nanofilm and Temasek to enable the transition to Hydrogen Economy

Integrated Solution provider with Deep Tech components

Leveraging Nanofilm's Core Technologies

Centre of Excellence in Singapore for Product Development

R&D with Support from Leading Universities

Powering hydrogen end-use applications for adoption

Backed by Strategic Shareholders

Differentiated technology

- >80 patents & trademarks
- 3,000 employees
- 4 production sites & 3 R&D centers

TEMASEK

Global network

- Diverse portfolio across geographies and sectors
- 900 employees across offices in 9 countries

65%

35%

*...up to **S\$140mn** in initial investment*

Deeptech to Accelerate Hydrogen Adoption

Despite early adopters, there are hurdles to overcome for widespread adoption for cost and performance.

	Status Today	Technology Solution
Bipolar Plates	✗ Expensive Graphite Plates ✗ Unable to scale production	✓ Stainless Steel Bipolar Plates ✓ Enabled by nanotechnology coating to withstand acidic environment
Catalysts	✗ Expensive	✓ Lower precious metal use ✓ Long lasting and durable
Nascent Infrastructure	✗ Lack of infrastructure	✓ Integrated systems with on-site hydrogen generation

Deep Tech Solutions Provider Across Technology Stack

Components

Bipolar Plates, Catalyst, Membrane
Electrode Assemblies

Technology Foundation

- Leveraging Nanofilm's established portfolio of Deep Tech solutions
- Serving Chinese Automotive market

Subsystems

Electrolysers, Methanol reformers, Fuel Cell
Stacks, Solid state Storage

Modular Subsystems

- Providing flexibility to customers
- Meeting usage and energy storage requirements

Integrated Solutions

Low Power and High-Power Systems

Complete turnkey solutions

- Accelerating end-user adoption

Leveraging Deeptech and Vertical Integration

Sydragen Confidential

System Product lines

Portable Low Power
~100-500W

Low Power Backup
1-5kW

High Power Generation and Backup
100-130kW 1MW

Future development

Key Features

- Solid state gas storage (Low temperature, metal hydride)
- Only water and electricity input (Onboard electrolyser)

Key Features

- Grid Relief for EV Charging Hotspots, other high-power uses
- Utilises standard H₂ cylinders; *piped H₂*

Key Applications

Distributed Power

Electric Vehicle
Charging

Mission Critical
Applications

Delivering a resilient energy infrastructure

Piloting piped Hydrogen for distributed power generation

Location

Hydrogen production facility
– future receptacle for green
H₂ imports

Power Generation

End-Application

**Powering Electric vehicle
charging stations**

Accelerating the Energy Transition, Together

Partnerships for demonstration projects

DeepTech Components

Key Foundational technologies

H₂ Supply Chain

Including carrier fuels:
Methanol, Ammonia, other
Organic carriers

H₂ Production

Green H₂ producers

**Accelerating the
Energy Transition**

Integrated Solutions

Turnkey for end-users

End-uses

Mobility

- Cars
- Trucks
- Ships
- Drones

Distributed Power

- Primary
- Secondary
- Backup
- Household
(Power & Heat)

Grid Support

- Electric Vehicle
Charging

THANK YOU

David DeVries
Chief Technology Officer
